

CAPTECH
POWER QUALITY SOLUTIONS

Energy Management

Energy Management

An important part of ensuring optimum performance of a system is through a thorough system analysis.

Such analysis can include network modelling, auditing and reporting.

We identify areas of improvement for greater efficiency and cost savings.

Captech's extensive engineering capability can assist in providing system analysis and customised energy management solutions to improve system performance.

Because it can be difficult to determine the primary cause of a power quality problem, we take a methodical approach to identifying power disturbances and recommending the most cost effective solution.

1

Analysis

A comprehensive audit of the current system using state of the art analysis and fault finding tools.

2

Costing

A solution is provided, including detailed explanations and full costings and expected savings.

3

Design and implement

A customised solution is designed, built and implemented on-site.

4

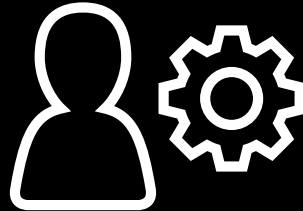

Cost savings realised

The results will be monitored against expected savings.

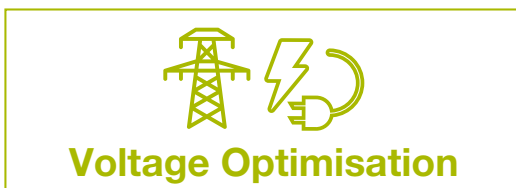

Service and Support

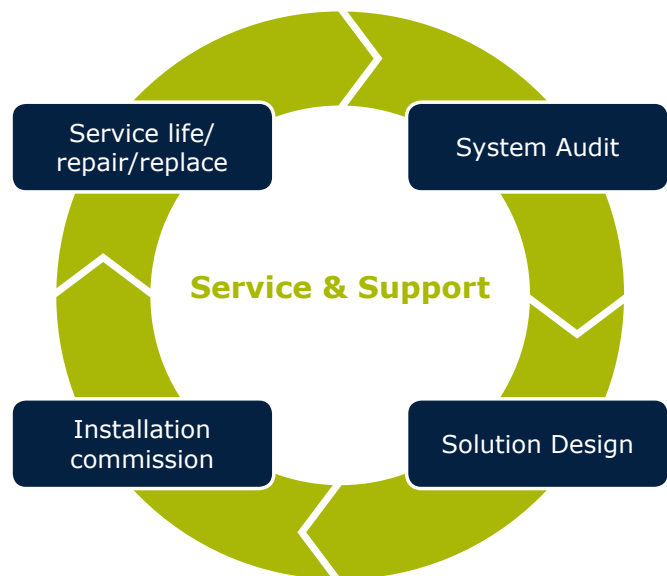

Captech can rectify;

- High energy costs
- Unstable equipment operation or failure
- Production losses

Through;

Captech offer a range of product quality management services for the life of your system. This includes auditing, engineering and design, manufacture, testing and commissioning and ongoing maintenance, to ensure maximum asset and system efficiency.

Phone Captech on 1300 280 010 for an obligation free chat about your system and how energy management can save you money.
